

LODDON CAMPASPE
Land and Water Management Plan
Shaping the future of irrigated farming

COMMUNITY WORKSHOPS

We want to find out what the local irrigation farming priorities are so we can help our communities get them funded.

Whether it's farm planning, building knowledge and stewardship to help with decision making, innovating and supporting new technology or helping you with land-use and capacity questions, we know the benefits of getting the best information possible.

The Land and Water Management Plan is your chance to influence government investment in land and water management. By helping us identify the local priorities, you can be part of community action.
