

Invitation: Carbon Farming Field Trip

Are you considering a carbon farming project on your property?

Expressions of Interest (EOI) are now being accepted for a two-day *Carbon Farming Field Trip* to western Victoria.

All participants will visit the *first* Carbon Farming Initiative (CFI) revegetation project in Victoria. The mixed species environmental planting has been established by farmers Peter and Christine Forster at Bullock Hills. Hear first-hand how to establish and register your own CFI project and generate carbon credits.

Participants will also visit one of the following two properties:

1. **Jigsaw Farms, Hensley Park**
4,900 ha sheep and cattle enterprise with landscape scale revegetation and farm forestry plantings. Methods to reduce emissions from grazing systems are also being explored.
2. **Coorona, Branxholme**
Sheep and cropping enterprise trialling the use of grazing management and perennial pastures to increase soil carbon through improved landscape function.

The field trip is open to farmers and Landcare members in the North Central CMA region. **To apply please fill in and submit the attached EOI form - places are strictly limited!**

When: Wednesday 10 and Thursday 11 April

Where: Hamilton and Ararat, Victoria

Sponsorship: will cover the cost of bus travel (from Bendigo or Maryborough), accommodation and all meals.

EOI: Expressions of interest should be submitted to the North Central CMA by 5pm Tuesday 2 April 2013.

This event and all associated material are supported by funding from the Australian Government's Department of Agriculture, Fisheries and Forestry as part of the Carbon Farming Initiative Communications Program.
